# FLYING HARRY

## TASK 1

Create a CSS animation of Harry Potter flying on his wand. You are required to design Harry Potter from scratch and not use any image. You are free to design the background by yourself.

## TASK 2

Add a feature to the animation, where on clicking on any part of the GIF, Harry potter moves in that direction. The object needs to necessarily reach the point where the mouse is clicked and not just change its angle of movement.
